INDUSTRY EXPERIENCE

Gojek | The biggest ride-hailing & superapp in Indonesia. \$5B USD Valuation.

Jakarta, Indonesia

Lead Data Scientist - Routing & Maps

Jan 2026 – Present

Senior Data Scientist - Routing & Maps

Jun 2022 – Jan 2026

- Built and deployed a production-grade internal personalized ETA prediction model serving up to 10k request per second traffic leveraging real-time streaming live traffic features. Achieved better ETA error than Google ETA model.
- Co-led the strategy and execution to eliminate Google Maps dependency, securing \$1M+ in annual savings. Engineered an in-house routing model using LightGBM that improved travel time estimation to within a 1–2% parity of route quality benchmark.
- Designed and executed advanced experimentation frameworks, including A/B, A/A, switchback testing, and Difference-in-Differences (DiD), to rigorously validate machine learning model efficacy and quantify business impact.
- Managed and optimized approximately 200 Flyte data production pipelines, both batch and real-time (streaming). The combined pipeline processes over 1 million rows of data daily.

HappyFresh | Quick commerce startup. Raised \$97M USD in Series D.

Jakarta, Indonesia

Data Scientist - Search & Ranking

Feb 2021 – Jun 2022

- Improved conversion rate metrics by approximately 2% by enhancing the internal next-purchase ranking models (tree-based model) which predicts better order for items that the users preferred.
- Developed tree-based gradient boosting model to predict out-of-stock items in supplier stores, leading to a 3–5% improvement in key inventory metrics across >100 stores in three countries.

FinAccel | The biggest BNPL startup in Indonesia. \$1.6B USD Valuation.

Jakarta, Indonesia

Data Scientist - Chatbot

Feb 2020 – Feb 2021

- Developed email autoresponder and chatbot using LSTM models to support customer service operations, automatically resolving approximately 53% of daily incoming emails and 33% of daily chat inquiries.
- Built a product recommendation system to extract product embeddings and optimized the batch prediction speed by 8× using Approximate Nearest Neighbors (ANN) techniques on the product embeddings.

EDUCATION

Saarland University, Saarbrücken, Germany

- Ph.D in Computational Linguistics (Withdrawal, Unfinished)

University of Amsterdam, Amsterdam, The Netherlands

- M.Sc in Artificial Intelligence

University of Indonesia, Jakarta, Indonesia

- B.S. in Computer Science
